What's Hot

Tabletop Cooking

Your kitchen table is now all you need to prepare a piping hot meal. The center of this table heats up to 430F and forms a shallow cooking pit. Complete meals can be created right there, without using pots or pans. When switched off, the surface becomes completely flat again. It's made from heavy-gauge stainless steel, so it's durable and easy to clean. It goes any place where there is an 115V electrical outlet.
